Magic's Decision Desk

From market noise to an accountable decision

A paper-only application that follows the full path from public market data to opportunity evaluation, modeled execution and review. Separate $250 simulated accounts keep bot, personal-desk and contest results from being confused.

Evaluate before acting

Distinct Top 5 and Qualified Top 2 lists feed a timestamped entry window and versioned policy.

Record honestly

Journaled intent, fill/refusal, replay and duplicate prevention support a separate M6 desk library.

Compare without pretending

Live market quotes, paper results and real money remain distinct. M7 passkeys and M8 writes are planned.

AI-assisted development directed and refined by Daniel Kavanagh. Technical evidence was reviewed against source and dated project records.

STATUS Development dashboard and synthetic read-only desk verified; personal trade confirmation disabled.
