THREE PROJECTS.
ONE BUILDER.

AI-Assisted Software, Hardware Integration & Automation

BIG POPPA

Mining observability and safety: a dated 15-minute trial recorded 212.5 TH/s mean, confirmed shutdown and power restoration. Persistent V2 controls pending.

MAGIC'S DECISION DESK

A paper-only decision pipeline with live public data, a versioned strategy and separated journals. M6 read view exists; M7/M8 remain planned.

FORMULA NONE FITNESS

Native iOS source, GE CS10G protocol engineering and a Zepp calorie-reporting experiment. Today M1 runs in Simulator. Other Fusion views are artwork; device acceptance and native watchOS remain unverified.

DISCIPLINES

Product direction • UI systems • Python and TypeScript • SwiftUI and SwiftData • BLE protocols • HealthKit reads • journaling • testing • privacy and operational boundaries

Daniel directed the objectives, reviewed results and refined AI-assisted development through testing and troubleshooting. No hand-coding, employment or certification claim is implied.

The accomplishment is a body of real work, with evidence strong enough to show its limits.
